

Benefits of the Quantum RBS Solutions:

Hands-free, worry free data protection, so you can sleep at night.

Cost Effective

- No initial hardware, software or licensing startup capital costs.
- Inherent de-duplication process and intuitive configuration, reduces data storage costs by providing protection of the data that's important to your company.
- Charges based on monthly storage utilization realize 60-90% data compression and higher.
- Delta blocking technology algorithm examines file changes, only backs up changes to files/documents and not an entire copy.

Security and Reliability

- 100% Canadian based company.
- Redundant data center replication and reliable fiber network provides 100% guaranteed up-time.
- Security through AES, DES and Blowfish encryption. Data is encrypted and compressed before offsite transmission, delivered in encrypted, compressed format and stored in the same format at our secure data center. Data is secure from QRBS staff and other third parties.
- Client support services available on 24/7 365 days a year.
- A dedicated Research and Development team ensures integrity and business continuity of ever evolving technology by applying updates transparently and automatically.
- Autonomic Healing eliminates data corruption and ensures reliable data integrity.

Ease of Administration

- Agent less architecture simplifies installation and setup requiring no additional software on each computer requiring protection.
- Scheduling options allow companies to define their backup schedules around their business needs.
- Up-to 9,999 files and folder revision levels provide better control over data and records management.
- Ad-hoc reporting structure for periodic evaluation and analysis of company data allows organizations to easily separate critical from important data with simple archive options direct from the console.
- Business expansion or migration processes can be accomplished in record time, with ease, sophistication and style, where data can be restored to a completely different location.
- Administrators can be divided into department responsibility allowing more effective management of data and records management.
- Easier, more reliable performance of regular Disaster Recovery testing.

Email/Pager Notification: Daily email or pager notifications add proactive reliability.

Quick Data Restores: Bare metal restore capabilities, allow a company to recovery from a critical business failure in as little as 24 hours, with immediate data restoration on a day-to-day basis.

Open file system and databases: Back up open data bases and critical email services without having to shut them down, no matter the platform, for real time data protection of critical services.

Storage Quotas: There are no limits to the amount of data your company can backup. Backup as much as you need, when you need it without having to worry about storage quotas.

Long Term Storage/Backup Lifecycle Management (BLM): Meet regulatory, legal, audit and Government compliance issues with ease and reduced effort. Options to migrate older tape libraries to our BLM platform for your easy recovery or restoration provide more effective control over document and records retrieval and electronic destruction.
